

The correct pruning of Bio PLUS+ fruit trees

For a rich harvest and long life

In winter

- 1 Remove competing stems
- 2 Shorten centre shoot, when grown too long
- 3 Remove stems crossing each other's way
- 4 Prune superficial side shoots
- 5 Cut stems growing too dense

In summer

- 6 Remove water shoots
- 7 Remove shoots growing low on the stem
- 8 Remove shoots growing from the roots below the grafting point
